

TABLE PURSUANT TO CT6.41# - SPECIFIC REQUIREMENTS (01/2000)FELLING METHODSCUTTING UNITS

During felling operations all trees must be kept within cutting unit boundary All

Mechanized felling equipment will not be operated on slopes greater than 35%. All

FELLING EQUIPMENT

Mechanical felling equipment will be limited to a boom shear/saw with a minimum 20-foot reach and a static ground pressure less than 8.5 lbs/sq in. All

Existing skid trails and roads would be used when possible on harvest units to reduce increased levels of soil compaction and displacement, except where existing skid trails can cause detrimental soil or hydrologic conditions that could be avoided with alternative skid trail location. All

All tractor based activities (felling, skidding, hauling, etc.) would occur only during dry or winter conditions. All
